

The expertise

CIME develops processes for wastewater treatment that take into account environmental quality standards. Studies can be carried out on all types of polluted effluents according to your objectives in 4 steps :

- Definition of the treatment route
- ELaboratory scale experiments to determine treatment effectiveness
- Operating conditions confirmed on a pilot scale
- Implementation directly on your site

Added value

- Improving the efficiency of water treatment
- Reduction of costs related to wastewater treatment
- Implementation of processes adapted to each issue
